

Tomlinson has been producing quality aggregates for more than 40 years, and has 14 pits and quarries situated throughout the Ottawa area, Brechin and Bruce Mines.

From Rock to Road

Our pits and quarries produce the critical foundation for roadway infrastructure, buildings and other structures. The heavy construction industry relies on high-quality aggregate supply for its success, which is why our product is used in many applications including ready-mix and precast concrete, asphalt, hard rock, road building and construction. Products include:

- Premium concrete
- Asphalt aggregates
- Natural, manufactured & recycled aggregates

Ontario Trap Rock

OTR is a specialty aggregate quarry which sits on a 1,000 acre site on the shores of Lake Huron. It contains more than 80 million tons of diabase. The very hard, durable nature of trap rock makes it ideally suited to the stringent specifications of railroads and high friction asphalt applications. OTR offers:

- Superior thermal & acoustic properties in rock wool insulation
- Higher than average strength in specialty concrete applications
- Skid-resistant, durable, long-lasting road surfaces
- AREMA Compliant

Over 50 Asphalt Mixes

Tomlinson is the largest hot-mix asphalt producer in Eastern Ontario and a leader in the region's asphalt road construction. Tomlinson uses self-sourced aggregates to produce more than 50 different asphalt mixes. Our experts have successfully designed and manufactured asphalt for projects at the municipal, provincial, and federal levels, from parking lots to high-volume highways. We can provide:

- Granitic sand
- Dolostone
- Dolomitic sandstone
- Driveway mix
- High-end FC 2 & SMA mixes
- Asphalt mix designs using Marshall & Superpave methods

Quality Control

Owning quarries and pits from East Ottawa to Bruce Mines allows us to retain all the necessary products for each project. We maintain two laboratories at Tomlinson. Our main facility is CCIL Certified for Types A, B, C, and D testing. We also have a mobile laboratory that was constructed and designed to shadow our highway division along with stationary labs that are located in Brechin, and Ontario Trap Rock.
