

Tomlinson is recognized for its award-winning innovation and proven experience with design-build projects, leading the industry in successful completion of the most complex construction projects across Ontario.

Design-Build Expertise

We are primarily focused on the construction of large multi-operational projects for federal, provincial, and municipal authorities, including rapid-replacement bridges, highways and road construction. Our diversified group of professional engineers, technologists, technicians and skilled tradespeople demonstrate their capabilities in all components of a project.

Our experience and expertise ensures we can meet an ever-increasing demand for sustainable transportation infrastructure systems in municipalities throughout Ontario. Our work involves all facets of road and bridge construction including; excavation, forming and supply of ready mix and asphalt.

High-Profile Projects

- Light Rail Transit (LRT) - bridge replacement, highway expansion, asphalt & paving
- Hunt Club Road extension
- Bearbrook bridge replacement
- Interchanges & sections of Highways 416 and 417 (the Trans Canada Highway)
- Lees Ave & Carling Ave bridge rapid lifts

Award Winning

- Six provincial paving awards
- Ontario Steel Design Award for Excellence - Lees Avenue bridge
- Portland Cement Association
- American Public Works Association
