

WASTE & RECYCLING, PROCESSING FACILITIES AND TRANSFER STATIONS

Today's environmentally conscious customers demand an integrated and sustainable approach to handling their waste management needs.

Innovative and Integrated Facilities

Tomlinson Environmental Services has put the infrastructure and processes in place to meet and exceed our industrial, commercial, and institutional customers' expectations for waste collection, recycling and processing.

Commitment to Green Building Programs

We provide the reporting required for builders to show their commitment to green building programs such as, BOMA BEST and Leadership in Energy and Environmental Design (LEED).

Sustainable Waste Disposal Options

Open in 2016, the Tomlinson Waste Recovery Centre (WRC) combines a state-of-the-art construction and demolition recycling facility, a traditional blue and black box processing facility, an electronics and appliances recycling depot and a waste transfer station for any material that can't be recovered.

The Tomlinson Construction and Demolition (C&D) Material Recycling Facility at Springhill and the WRC support recycling and recovery efforts for all manner of construction materials including, source separation of cardboard and plastic, reclaiming construction materials like aggregates, rock and concrete, which can be crushed and reused, recycling of metals and wood, and the conversion of mixed materials into biomass or fuel sources.

TYPICALLY OVER 80% MATERIALS DIVERTED

Over 120,000 Tonnes can be diverted from landfills each year. Read more on the Waste Recovery Centre website: wasterecoverycentre.com
