

**Leveraging its broad range of integrated waste management services, Tomlinson is able to build and operate landfills while offering innovative technologies to divert a large percentage of waste and extend the life of these assets.**

## Landfill Operations

Tomlinson's landfill management experience ranges from construction and cell development through to capping and closing a site.

Tomlinson manages the day-to-day operations for three Eastern Ontario Landfills, providing the people, expertise and equipment required to help Municipalities responsibly manage their assets.

## Waste Recovery & Diversion

As part of its Waste Recovery Centre (WRC), Tomlinson operates a Materials Recovery Facility and a Construction and Demolition Recycling Facility – both provide our customers with the opportunity to divert some of their waste. The more we are able to divert waste from landfills, helps extend the useful life of landfills.

## Forward Thinking

All Municipalities face the challenge of managing waste in an environmentally responsible manner. For those looking to extend the life of their landfills or simply divert whatever they can, Tomlinson has the answer.

With the opening of Tomlinson's WRC, customers have the opportunity to reduce their impact on the environment and join the circular economy.

## Customer Service

As your partner, Tomlinson will continually assess your needs, ensure processes are as efficient as possible and leverage its breadth of services to propose innovative solutions.
