

REVOLUTIONIZE YOUR WORKFLOW

Dear TREAD Users,

What is happening: We are excited to announce an upcoming release of the TREAD application, which includes several new features and improvements designed to enhance your experience and streamline your daily tasks. The new release will introduce a modern design, improved navigation, and enhanced functionality. Additionally, the TREAD mobile app is now available on both iOS and Android devices.

How it impacts you: The new features and updates will provide a better user experience with improved navigation and functionality. You will also find new terminology and updated processes for requesting jobs and dispatching. The mobile app will allow you to access TREAD's services on the go, making it easier to manage your tasks from anywhere. Training sessions will be booked to ensure you have the most up-to-date information.

How to get help: To assist you with the transition, we are creating a training guide and a cheat sheet for drivers to help them navigate their day-to-day tasks without needing to call dispatch or the service desk frequently. These materials will be available during the training session and on our internal sites. If you have any questions or need assistance, please contact ChangeManagement@tomlinsongroup.com.

We appreciate your cooperation and look forward to providing you with an improved TREAD experience.

Best regards,

Change Management Team
